

## **CERTIFICATE**

This is to certify that the thesis, entitled “Improving the Modeling and Implementation of Software Reliability using Fuzzy Logic Techniques” submitted by Syed Wajahat Abbas Rizvi for the award of Degree of Doctor of Philosophy by Babu Banarasi Das University, Lucknow is a record of authentic work carried out by him under our supervision. To the best of our knowledge, the matter embodied in this thesis is the original work of the candidate and has not been submitted elsewhere for the award of any other degree or diploma.

**(Dr. Raees Ahamd Khan)**

Professor and Head,  
Department of Information Technology  
Babasaheb Bhimrao Ambedkar  
University Lucknow.

**(Dr. Vivek Kumar Singh)**

Professor and Head,  
Department of Information  
Technology, Babu Banarasi Das  
National Institute of Technology  
and Management, Lucknow.

Date:

Place: Lucknow

## DECLARATION

I, hereby, declared that the work presented in this thesis, entitled “Improving the Modeling and Implementation of Software Reliability using Fuzzy Logic Techniques” in fulfillment of the requirements for the award of Degree of Doctor of Philosophy of Babu Banarasi Das University, Lucknow is an authentic record of my own research work carried out under the supervision of Dr. Vivek Kumar Singh and Dr. R. A. Khan. I also declare that the work embodied in the present thesis is my original work and has not been submitted by me for any other Degree or Diploma of any university or institution.

Date

Syed Wajahat Abbas Rizvi

## ACKNOWLEDGEMENTS

First of all, I thank God for all the talents he blessed me with, for his merciful and faithful guidance, and most importantly, for saving me and granting me a spirit of wisdom.

I would like to thank Prof. A. K. Mittal, Vice-Chancellor, Babu Banarasi Das University, for providing me an opportunity to complete this dissertation. I consider myself fortunate and privileged to have Dr. V. K. Singh and Dr. R. A. Khan, my research guide and co-guide respectively. I am deeply indebted to him for shaping my path to research by guiding me with their extensive knowledge, insightful discussions, questions and innovative thinking. I thank the almighty for giving me such knowledgeable persons to foster my succession. Certainly, I am short of words to convey my real feelings for their help and concern. I do not hesitate to state that without his help it would not have been possible for me to complete this research work.

I am very much thankful to Dr. Reena Srivastava, Head, Department of Computer Science, BBD University, for sparing some of her valuable time for giving scholarly and critical consultation during the course of study.

I would like to warmly thank to my parents for all their love and blessings. I am also grateful to my wife for many times she put aside her wishes and plans and encouraged me to finish writing this thesis. Last but not Least, I cannot afford to forget the tolerance of my little son, who has postponed some of his wishes and wait patiently for the successful completion of this research.

(Syed Wajahat Abbas Rizvi)

## PREFACE

Today, the influence of information technology has been spreading exponentially, from high level research going on in top labs of the world to the home appliances. Such a huge demand is compelling developers to develop more software to meet the user expectations. As a result reliability has come up as a critical quality factor that cannot be compromised. Therefore, researchers are continuously making efforts to meet this challenge. In general an accurate estimate of reliability can be obtained through software reliability models only in the later phases of software development like testing. Predicting the software reliability early would be useful for software designers since it provides vital information to take decision on design and resource allocation and thereby facilitates efficient and effective development process towards developing a reliable product. Therefore, it is reasonable to develop models that more accurately arrest the faults as early as possible, before they propagate undetected to later stages and cause severe and unrecoverable damage.

It is evident from the review of the literature that no such fuzzy logic based framework exists that guides the process of quantifying software reliability on the basis of requirement and design measures, before the coding of the software start. This fact further strengthens its significance as well as developmental feasibility. With this spirit, the research has proposed “Fuzzy Logic based Software Reliability Quantification Framework (<sup>FL</sup>SRQF)”. Subsequently the framework has been implemented, and the research has developed an “Early Stage Reliability Prediction Model” (ESRPM)

through Fuzzy Inference System, which can predict software reliability of the developing software up to its design stage.

The development process starts with conceptualization as well as the description about the current situation along with the highlights of early reliability prediction. A comprehensive state-of-the-art on software reliability prediction and estimation has been put forth as the second step followed by a summary of critical findings. Subsequently the research has proposed a structured framework that may overcome the inadequacies of earlier studies and quantifies the reliability, on the basis of the requirement and design phase measures, before the coding starts.

All the eight phases of the framework has been implemented systematically, and the ESRPM has been validated theoretical as well as statistically along with a comprehensive sensitivity analysis. During the validation process it has been found that the defuzzified values of reliability from the ESRPM have strong correlation with the already known corresponding values of reliability. Predictive Accuracy of the model is also presented with encouraging quantitative values of MMRE, BMMRE, MdmRE and Pred(n).

Subsequently in order to strengthen its claim to be a better reliability prediction model and to enhance its acceptance the ESRPM has been compared theoretically as well as empirically with existing reliability models. The findings from the comparison have ensured that the model developed in this research has an edge over the already existing Models.

One of the major significant contribution of this research is the Fuzzy Logic based Software Reliability Quantification Framework (<sup>FL</sup>SRQF). The framework is quite prescriptive in nature, and will definitely facilitate industry professionals and researchers to predict software reliability in the early stage of development, and subsequently decrease the probability of software's unreliability. Besides that the consideration of the requirements phase along with the design provides this research an edge over other studies those are based on only design phase, because ignoring or overlooking requirements deficiencies and only concentrating on making the design constructs superior will not seems good enough.

Identification of the suitability of various requirement and design measures as a contributor for the software reliability is also one of the major effort of this research. Further In most of the cases, developed models only provide quantitative values but neither provides suggestions on how to make improvement, nor the precautions on how to avoid abnormalities. Therefore, to fill this gap this research recommends to provide needed suggestive measures based on the results and contextual interpretations. Apart from above based on the predicted reliability of developing software upto its design stage, the developers may predict the reliability of the final software to be delivered in future.

## TABLE OF CONTENTS

	Page No.
<i>Supervisor's Certificate</i>	ii
<i>Declaration</i>	iii
<i>Acknowledgements</i>	iv
<i>Preface</i>	v
<b>CHAPTER 1 : INTRODUCTION</b>	<b>1-25</b>
1.1 BACKGROUND	1
1.2 SOFTWARE QUALITY	3
1.3 OBJECT-ORIENTED PARADIGM	5
1.4 SOFTWARE RELIABILITY	9
1.5 FUZZY LOGIC	11
1.5.1 Fuzzy Logic Vs Formal Methods	12
1.5.2 Fuzzy Logic Vs Probability	14
1.6 OBJECTIVES OF THE STUDY	15
1.7 RESEARCH PROBLEM	17
1.8 METHODOLOGY	19
1.8.1 Conceptualization	19
1.8.2 Literature Review	19
1.8.3 Developing the Framework	19
1.8.4 Implementing the Proposed Framework	20
1.8.5 Theoretical and Empirical Validation	20
1.8.6 Predictive Accuracy	20
1.8.7 Comparison of Developed Model with Existing Reliability Prediction Studies	20
1.9 SIGNIFICANCE OF THE CONTRIBUTION	21
1.10 LIMITATIONS	23
1.11 THESIS OUTLINE	24

## **CHAPTER 2 : RELIABILITY PREDICTION: A REVISIT** **26-54**

2.1	BACKGROUND	26
2.2	BRIEF TAXONOMY OF SOFTWARE RELIABILITY MEASUREMENT MODELS	28
2.3	WHY EARLY RELIABILITY MEASUREMENT IS NECESSARY	30
2.4	VIRTUES OF EARLY SOFTWARE RELIABILITY MEASUREMENT	38
2.5	STATE-OF-THE-ART ON RELIABILITY MEASUREMENT	39
2.5.1	A Fuzzy Inference Model for Reliability Estimation of Component Based Software System	46
2.5.2	Reliability Estimation of Object-oriented Software: Design Phase Perspective	47
2.5.3	Reliability Quantification of Object-Oriented Design: Complexity Perspective	48
2.5.4	Towards a Formal and Scalable Approach for Quantifying Software Reliability at Early Development Stages	49
2.5.5	Software Reliability Assessment Based on a Formal Requirements Specification	51
2.6	SUMMARY OF REVIEW FINDINGS	52
2.7	CONCLUSION	54

## **CHAPTER 3 : FUZZY LOGIC BASED RELIABILITY QUANTIFICATION**

### **FRAMEWORK (<sup>FL</sup>SRQF)** **55-67**

3.1	BACKGROUND	55
3.2	PREMISES	56
3.3	CONCEPTUALIZATION	57
3.3.1	Assess Need and Significance	57
3.3.2	Explore Advantage at Early Stage	57
3.3.3	Assess the Contribution of Fuzzy Logic	58
3.3.4	Explore Developmental Feasibility	58

3.4	IDENTIFICATION	59
3.4.1	Identify Reliability Factors	59
3.4.2	Select one or more key Factors	59
3.4.3	Identify Requirements and Design Level Metrics	59
3.5	ASSOCIATION	61
3.5.1	Correlate Requirements and Design Metrics with key Factor(s)	61
3.5.2	Correlate key Factor(s) with Reliability	61
3.5.3	Finalize the Metrics Set	61
3.6	QUANTIFICATION	62
3.6.1	Select Input and Output Variables	62
3.6.2	Develop Fuzzy Profiles	62
3.6.3	Develop Fuzzy Rule Base	62
3.6.4	Perform Fuzzification	63
3.6.5	Perform Defuzzification	63
3.7	CORROBORATION	63
3.8	ANALYSIS	64
3.8.1	Analyze Quantified Reliability and Metrics	64
3.8.2	Perform Contextual Interpretation	64
3.8.3	Develop Suggestive Measures	65
3.8.4	Finalize the Framework	65
3.9	ASSESSMENT AND AMENDMENT	65
3.10	PACKAGING	65
3.11	FRAMEWORK'S KEY FEATURES	66
3.12	CONCLUSION	67
<b>CHAPTER 4 : FRAMEWORK IMPLEMENTATION</b>		<b>68-104</b>
4.1	BACKGROUND	68
4.2	PROPOSED RELIABILITY MODEL	69
4.3	IMPLEMENTING IDENTIFICATION PHASE	70
4.3.1	Identify Reliability Factors	71
4.3.2	Select one or more key Factors	72
4.3.3	Identify Requirements Level Metrics	72

4.3.4	Identify Design Stage Metrics	74
4.4	IMPLEMENTING ASSOCIATION PHASE	75
4.4.1	Correlate Requirements and Design Metrics with key Factor(s)	75
4.4.2	Correlate key Factor with Reliability	77
4.4.3	Finalize the Metrics Set	78
4.5	IMPLEMENTING QUANTIFICATION PHASE	78
4.5.1	Select Input and Output Variables	79
4.5.2	Develop Fuzzy Profiles	83
4.5.3	Develop Fuzzy Rule Base	90
4.5.4	Perform Fuzzification	92
4.5.5	Perform Defuzzification	94
4.6	IMPLEMENTING CORROBORATION PHASE	94
4.7	IMPLEMENTING ANALYSIS PHASE	98
4.7.1	Analyze Quantified Reliability and Metrics	99
4.7.2	Perform Contextual Interpretation and Develop Suggestive Measures	103
4.8	CONCLUSION	104

## **CHAPTER 5 : EMPIRICAL VALIDATION AND PREDICTIVE**

### **ACCURACY OF THE MODEL**

**105-144**

5.1	BACKGROUND	105
5.2	THEORITICAL VALIDATION	106
5.3	SENSITIVITY ANALYSIS	107
5.4	EXPERIMENTAL VALIDATION	133
5.5	MEASURES OF PREDICTIVE ACCURACY	136
5.6	PREDICTIVE ACCURACY OF RELIABILITY MODEL	140
5.7	CONCLUSION	144

<b>CHAPTER 6 : COMPARISON WITH OTHER RELIABILITY STUDIES</b>	<b>145-163</b>
6.1 BACKGROUND	145
6.2 QUANTITATIVE COMPARISON	145
6.3 QUALITATIVE COMPERISON	152
6.4 CONTEXTUAL FINDINGS	161
6.5 CONCLUSION	163
<b>CHAPTER 7 : CONCLUSIONS AND FUTURE WORK</b>	<b>164-171</b>
7.1 BACKGROUND	164
7.2 MAJOR FINDINGS	165
7.3 CONTRIBUTION OF THE STUDY	167
7.4 FUTURE EXTENSION	170
7.5 CONCLUSION	171
